

Matrox Maevev
H.264 Encoders & Decoders

Sharing Critical Data in the Control Room

Matrox Maevev™ AV-over-IP devices provide a simple, cost-effective way to share high-quality, low-bandwidth content—between individual control room operators or on a collaborative video wall. To share your laptop screen, connect it to a Maevev encoder plugged into the LAN, and display your screen anywhere on the network using Maevev decoders. Switch between different sources including cameras and DVRs with easy-to-use PowerStream software.

Maevev distributes the AV that control room operators need to make critical decisions and can also be used to record screen activity and other content to network-attached storage.
